

# POWER WEIGHT

YOUR CHOICE  
FOR DRIVING SAFETY AND COMFORT

 **HOFMANN**  
POWER WEIGHT

# QUALITY FROM THE MARKET LEADER PAYS OFF

DIONYS HOFMANN – YOUR PARTNER FOR ALL YOUR BALANCE WEIGHTS NEEDS

When you consider that a couple of euro cents per wheel are decisive for high or poor quality, the choice is bound to be in favour of original equipment manufacturer quality from Dionys Hofmann. We offer our trade partners documented quality that complies with DIN ISO certification. We have tested our products down to the tiniest detail in test series and so can guarantee their durability and weight precision.

## 1. Precise and quick balancing

Balance weights from Dionys Hofmann are extremely precise. You can save working time because there is no need for complicated corrections after mounting.

## 2. The perfect weight for every wheel

As a full-range service provider, we supply weights for every rim type, material and every application with small weight increments. Don't make any compromises.

## 3. Precise weights for high-quality machines

It is not possible to balance precisely with cheap materials. Such materials will impair your service and will make expensive balancing machines entirely worthless.

## 4. Satisfaction for your customers

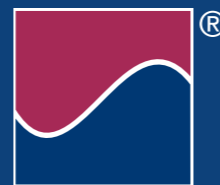

with our high-quality products. The customer receives the best service immediately at the first balancing. That saves both you and your customer a great deal of time, annoyance and money.

## 5. Products manufactured in an environmentally friendly way comply with statutory provisions

Cheap imitated products frequently contain toxic materials or are manufactured under environmentally harmful production conditions. Do not make yourself liable to prosecution by purchasing and processing banned or toxic materials for the sake of a relatively small amount compared to the overall costs.

# THE GLOBAL MARKET LEADER OF BALANCING WEIGHTS FOR OEMS

PRODUCTS OF THE MOST INNOVATIVE AND WORLDWIDE LARGEST PRODUCER OF BALANCING WEIGHTS

Dionys Hofmann balance weights are manufactured according to the strict quality standards laid down by the automotive industry. All of the original equipment manufacturer's tests must be carried out to ensure that components fulfil all the requirements, even when subjected to the most extreme abrasion and conditions. The fact that we are certified in accordance with ISO standards ISO/TS 16949 and ISO/14001 provides you and your customers with an assurance that the weights are manufactured according to strict controls and that we comply with all environmental regulations.

### 3. Deliver at any time

Hofmann's top priority is being able to deliver at any times, so our fully-automatic high bay warehouse is stocked with over 40 million parts. This equates to over 98% deliverability. High-quality packaging with pull zips ensure easy handling and make sure the goods arrive undamaged

### 1. Tested under the most severe conditions.

After 750 hours of salt spray testing and being subjected to extreme abrasion, Dionys Hofmann premium weights show no signs of corrosion. This fulfils the requirements of the automotive industry and the specifications of the OEM for external coating. Pure materials and high-quality raw materials ensure maximum adhesion of our adhesive weights. The brackets for our knock-on weights are made of high-quality spring steel to ensure a firm hold. Consequently, you can rely on our balancing weights even in the case of extreme exposure.

### 2. Complete range for all rim types and application areas.

Dionys Hofmann is a complete supplier and can provide the right weight for any rim type and design. In addition, Hofmann also offers universal weights for the aftermarket which are manufactured according to the same standards as used by the OEM's. Constant innovations and developments coupled with well-known car manufacturers mean that you are guaranteed to benefit from the latest products, optimum quality and a technical edge over your competitors.

## ECO-LINE

QUALITY AND TRADEMARK IN LINE WITH CURRENT MARKET VALUE ADHESIVE AND KNOCK-ON WEIGHTS FOR THE AFTERMARKET

### 1. Eco-Line – Dionys Hofmann's aftermarket brand

Assured quality from market leaders, compact range of products, attractive prices: these are the defining characteristics of the Eco-Line product range. Eco-Line is the reliable alternative for the aftermarket, offering fair value and produced in accordance with legal standards.

### 2. Extensive range of replacement parts, all from a single source – for a variety of demands.

The Eco-Line range is geared towards the demands of the aftermarket, catering for everything from knock-on weights and adhesive bars to roll goods, which are all available in both zinc and steel (Zn and Fe).

### 3. Eco-Line – guaranteed ability to deliver.

The Eco-Line is normally sold as private label merchandise and can be recognised by its white packaging, onto which a private label sticker can be applied. Naturally, large order quantities can always be catered for.

NO ORIGINAL – NO SECURITY

Be aware of what imbalance can do to your rims. High-quality driving comfort cannot be achieved with cheap copies. Not well balanced wheels damage your tyres, wheel bearings and shock absorbers. Manufacturer of cheap imitations often fail to fulfil the EU's quality requirements.

### Copies can rust

The corrosion stability of cheap weights is considerably worse than that of products from brand name manufacturers. In tests, dangerous rusting was detected on some steel weights within 72 hours, due to the poor coating. Illegal, toxic and environmentally harmful raw materials are sometimes used in the production. The resulting low-quality spring steel then leads to inferior adhesion in the case of adhesive weights and inferior clamping force in the case of knock-on weights.

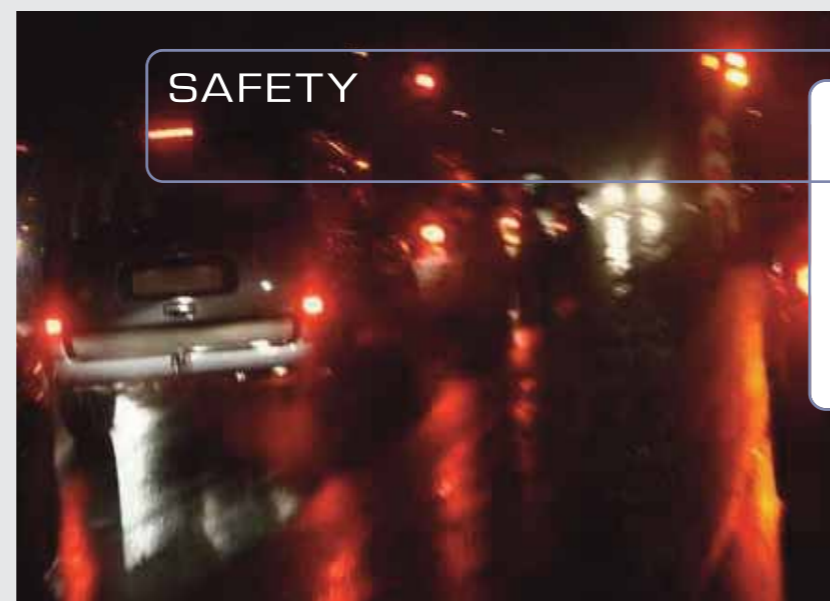

### Limited product range

Cheap manufacturers usually only have a very limited range of products available for the aftermarket. Cheap weights often do not meet the imprinted grammages, which means that new balancing is required as well as a new weight.

### No guaranteed availability

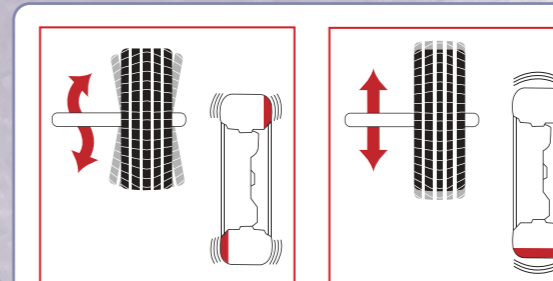

Cheap copies are not kept in stock. They are shipped from overseas in containers and the delivery time is 4-12 weeks. The packaging is often low-quality, can get damaged during the long journey, and may not even be suitable for this purpose. All complaints must be processed overseas, which is a protracted and laborious process.

## SAFETY

### Imbalance has a similar effect on wheels as hammer blows!

When driving a car at high speed, considering that an average car weighs one ton, it is essential for you to be able to rely on your vehicle 100%. Reliability, directional stability and therefore your safety, all depend on one small part: the balance weight.

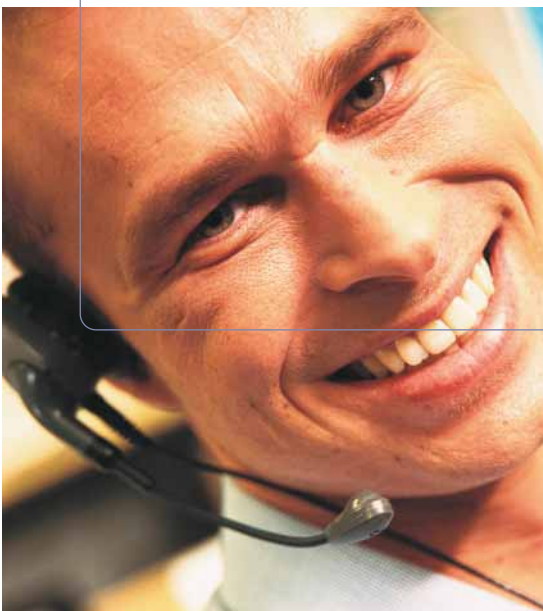

Dynamic imbalance and vertical imbalance have a similar effect on wheels as hammer blows and lead to unsafe road holding.

# ORIGINAL EQUIPMENT MANUFACTURER FOR MOST CAR MAKES WORLDWIDE

## SERVICE DOCUMENTED QUALITY

Please request our safety data sheets and the relevant, extensive material analyses for our products. All the documented evaluations performed according to the applicable DIN standards, especially the salt spray tests, are available for you at any time.
